Skills

Web Development

C++, Java, C#, PHP, JavaScript development

Creating, developing, and deploying applications with Docker and LXC
Git

Linux (I use Arch by the way)

Multi-Faceted Communicator (Customer to Back of House, and vice versa)

Experience

ATG General Contracting / Field Technician

Summer 2020 - PRESENT, FORT WORTH

Door to Door sales, training, and IT. Manages several clients simultaneously, trains new and existing coworkers, and provides clear communication between clients and contractors. Manages the company website, email servers, and configures new iPads, and any other technology related tasks.

Self-Hosting

For the past several years, I have grown my interests in hosting my own applications. This includes configuring home network solutions, setting up a Pi-Hole for whole network ad-blocking and anti-tracking, using Plex/Jellyfin to digitize my physical media collection, as well as developing and configuring gameservers. I use a ProxMox server built from my old gaming rig, and use a mix of virtual machines and linux containers.

Linux

In the summer of 2019, I switched from Windows to Linux. I can perform intermediate to expert tasks with Linux, and use Linux based systems for all of my self-hosted and other web-based applications.

Education

Tarrant County College / Comp. Sci Transfer

Fall 2018 - Present, FORT WORTH

Currently attending TCC, and will transfer to UTA in Fall 2023 to complete a Bachelor's degree in Computer Science, with a Mathematics minor.
